

AGRICULTURE CAN BE PART OF THE CLIMATE SOLUTION.

BACON, CHICKEN WINGS AND STEAK
WITH NET-ZERO EMISSIONS. **IT'S POSSIBLE.**

To feed a growing global population, we must produce food that is both good for people and the planet. Climate change is a threat to the world's food security, and the way we produce food must be part of the climate solution.

As one of the world's largest food companies, we have the opportunity, and the obligation, to lead sustainable change toward net zero by empowering producers, suppliers, customers and consumers.

We are the first major global company in our industry to commit to net zero by 2040. Can it actually be done? We think so and we're taking real actions to achieve our goal.

We're setting time-bound, science-based targets and backing them up with \$1 billion in capital over the next decade. We're supporting producers by investing \$100 million by 2030 in on-farm research.

We will cut our own emissions by 30% by 2030 and eliminate Amazon deforestation from our supply chain within five years. We will hold ourselves accountable by sharing our progress and tying executive compensation to environmental performance.

LEADING CHANGE ACROSS
THE FOOD INDUSTRY AND
ACHIEVING OUR GOAL OF
NET ZERO BY 2040 WILL BE
A CHALLENGE. **ANYTHING
LESS IS NOT AN OPTION.**
